

RML Example 4: Image Reflect

RML (Report Markup Language) is ReportLab's own language for specifying the appearance of a printed page, which is converted into PDF by the utility rml2pdf.

These RML samples showcase techniques and features for generating various types of output and are distributed within our commercial package as test cases. Each should be self explanatory and stand alone.

This example shows how you can reflect a background image in your page templates so that printers will be able to slice off the edges and not create obvious artifacts.
